

STARTING POULTRY FARMING

MY PERSONAL GUIDE TO SUCCESS

MARCUS

@FmarcineK1

1. Why I Started Poultry

I started poultry farming because I wanted to be independent and learn how to build something on my own. Even though I was managing someone else's farm, I used the experience to understand what works and what doesn't.

2. The Basic Setup

To start small, I needed: a brooder, feeders, drinkers, a heat source, clean bedding, and proper ventilation. I kept things simple and clean to avoid disease and stress for the chicks.

3. How to Care for Chicks

I make sure the chicks are warm, clean, and always have fresh feed and water. I also check them daily for sickness and separate any weak ones early to protect the rest.

4. Feeding Schedule and Tips

Morning (7am): Starter feed and fresh water.

Afternoon (12pm): Add more feed if needed.

Evening (3:30pm): Final feed. I avoid overfeeding to prevent waste and disease.

5. Common Diseases and How I Deal With Them

I watch for signs like pale combs, bloody droppings, and slow movement. I treat coccidiosis early with medication and always keep the coop dry and clean to prevent it. I also deworm regularly.

6. My Daily and Weekly Routine

Daily:

- Check for sick birds
- Clean feeders & drinkers
- Give fresh water & feed
- Close coop in the evening

Weekly:

- Clean deep with disinfectant
- Change bedding
- Buy feed/medication
- Check growth and note issues.

Final Words from Marcus:

Thank you for reading my beginner guide. If you follow these tips, you'll avoid many of the mistakes I made.
